NIVEUS BRINGS UNIFIED SEARCH TO WINDOWS MEDIA CENTER

Easily search through entire media catalogues and select Internet content utilizing the unified Niveus Search tool, now available for download.

Milpitas, CA – September 26, 2008 – Niveus Media, Inc. announces beta availability of the new unified Niveus Search, which enables easy retrieval of content accessible across the local network and Internet. The patent-pending Niveus Search offers Windows Vista® Media Center users an easy-to-use, 10' interface that provides an all encompassing scan of both the Media Center and Internet sources.

No longer do Media Center users have to scroll through lengthy catalogues trying to locate a certain movie, TV program, song, etc. Utilizing the unified Niveus Search yields visual results of the electronic program guide, recorded TV, music, photos, videos, and web-based content, from sources such as Netflix®, Flickr®, and Live365 Internet radio. Additionally, for the less decisive that aren't sure what to watch or listen to, by entering keywords of interest, Search will return a number of related results from across its sources.

Accessing and using the Niveus Search tool is simple and can be easily accomplished with the use of only a remote control. By selecting "New Search" via the Search icon on the Windows Media Center strip, users can enter keywords with the remote control (T9) or the onscreen keypad. Search then reveals results in a compelling gallery, with cover art, movie posters, icons, pictures, or other supported visual formats. The user can then click play, slideshow, or schedule a recording based on the type of result(s) returned. Previous searches can be found through a Previous Searches icon on the Media Center menu.

Now available via the [Niveus Software Labs](#) webpage, Niveus Search is being released as beta for all Windows Vista Media Center users for an undetermined amount of time to gather feedback, field results, and suggestions. Niveus will continue to release improvements to Niveus Search beta via the Niveus Software Labs and intends to release a production version of Niveus Search to the Windows Media Center community when ready. Niveus Search will be supported

by the user community in the [new Niveus Software Labs Forum](#). A gallery of screenshots can be viewed through the Niveus Software Labs by selecting the screenshots tab.
